1 Overview

This website contains multiple web-based tables of baseline descriptive statistics for (nearly) every follow-up interview variable collected as part of the DETECT study between 2018 and 2024. For more information about the DETECT project, please see the primary public repository at: https://github.com/brad-cannell/detect_fu_interviews_public.

For questions related to DETECT, please contact Dr. Brad Cannell at Michael.B.Cannell@uth.tmc.edu.

1.1 About DETECT

Eventually add a blurb that gives a little background about DETECT.

2 About

This is all copied from the Link2Care master table repo. Figure out if we want to do something similar for this project too.

Warning

The information on this page is not likely to be useful to many users. Rather, this page is intended to assist with site maintenance.

3 Overview of the data

The data for these tables is currently housed at UTHealth-Houston on the [DETECT Share-Point site](#). Contact Brad Cannell at Michael.B.Cannell@uth.tmc.edu if you have questions about accessing the data.

Add some other stuff as it becomes relevant...

4 Administrative information about the data

Currently, the code in this section is copied directly from the Link2Care master table repo. We will need to update it later if we are going to use it for this project too.

5 Codebook

The codebooks for the source data are available at: https://github.com/brad-cannell/detect_fu_interviews_public/tree/main/codebooks.

We may want to improve the links to the codebooks in the future.

Part I

Recruitment and Scheduling

6 Recruitment and Scheduling

This page will contain tables for the recruitment and scheduling data. It is possible that we will break those tables up across multiple pages as well.

Part II

Sociodemographic Information

Part III

General Health

Part IV

Home Inspection

Part V

EM Self-Report

Part VI

APS Investigations

Part VII

Interviewer Observations

Part VIII

LEAD Panel Assessment

7 LEAD Panel Assessment

This page contains tables that summarize the LEAD panel assessment data.

This page contains tables of baseline LEAD Panel Assessment characteristics for the DETECT F/U Interview participants. Statistics for the

7.1 Variable Name Key

The following table provides a description for each variable that appears in the following tables of descriptive statistics.

7.2 Statistics Not Summarized by MedStar ID

7.3 Statistics Summarized by MedStar ID

```
lead_unsum_table <- flextable(lead_unsum_table,
                              col_keys = c("var", "cat", "n_Initial assessment", "formatted_stats_Init
                              "n_Secondary assessment", "formatted_stats_Secondary assess
                              "formatted_stats_Post-detect assessment")) %>%

# Alternatively shade each group
bg(i = ~ shade == "FALSE", bg = "#edded", part = "body") %>%

# Rename columns
set_header_labels(
  var = "Variable",
  cat = "Category",
  "n_Initial assessment" = "N Initial Assessment",
  "formatted_stats_Initial assessment" = "Statistic (95% CI) Initial Assessment",
  "n_Secondary assessment" = "N Secondary Assessment",
  "formatted_stats_Secondary assessment" = "Statistic (95% CI) Secondary Assessment",
  "n_Post-detect assessment" = "N Post-DETECT Assessment",
```

```

    "formatted_stats_Post-detect assessment" = "Statistic (95% CI) Post-DETECT Assessment"
  ) %>%

  # Format width of table
  width(width = 1)

lead_sum_table <- flextable(lead_sum_table,
  col_keys = c("var", "cat", "n_Initial assessment", "formatted_stats_Init
    "n_Secondary assessment", "formatted_stats_Secondary assess
    "formatted_stats_Post-detect assessment")) %>%

  # Alternatively shade each group
  bg(i = ~ shade == "FALSE", bg = "#edded", part = "body") %>%

  # Rename columns
  set_header_labels(
    var = "Variable",
    cat = "Category",
    "n_Initial assessment" = "N Initial Assessment",
    "formatted_stats_Initial assessment" = "Statistic (95% CI) Initial Assessment",
    "n_Secondary assessment" = "N Secondary Assessment",
    "formatted_stats_Secondary assessment" = "Statistic (95% CI) Secondary Assessment",
    "n_Post-detect assessment" = "N Post-DETECT Assessment",
    "formatted_stats_Post-detect assessment" = "Statistic (95% CI) Post-DETECT Assessment"
  ) %>%

  # Format width of table
  width(width = 1)

```

8 Testing out downloading

Example from the [downloadthis website](#). This works, but Excel isn't the most user-friendly format.

Turn `lead_unsum_table` and `lead_sum_table` into a combined flextable object.
