8.2 Variable Name Key	19
8.3 Summary Statistics for LEAD Panel Assessment Positive Votes	19
8.3.1 Any positive determinations at each assessment (initial, secondary, and post-DETECT) for each subtype of abuse and any overall across all subtypes.	19
8.3.2 Final LEAD Assessment determination based on majority vote	19
8.4 Count and Percentage of Dissenting Votes for Each Panelist Discipline	19
8.5 Testing out downloading	19

1 Overview

This website contains multiple web-based tables of baseline descriptive statistics for (nearly) every follow-up interview variable collected as part of the DETECT study between 2018 and 2024. For more information about the DETECT project, please see the primary public repository at: https://github.com/brad-cannell/detect_fu_interviews_public.

For questions related to DETECT, please contact Dr. Brad Cannell at Michael.B.Cannell@uth.tmc.edu.

1.1 About DETECT

Eventually add a blurb that gives a little background about DETECT.

2 About

This is all copied from the Link2Care master table repo. Figure out if we want to do something similar for this project too.

Warning

The information on this page is not likely to be useful to many users. Rather, this page is intended to assist with site maintenance.

3 Overview of the data

The data for these tables is currently housed at UTHealth-Houston on the [DETECT Share-Point site](#). Contact Brad Cannell at Michael.B.Cannell@uth.tmc.edu if you have questions about accessing the data.

Add some other stuff as it becomes relevant...

4 Administrative information about the data

Currently, the code in this section is copied directly from the Link2Care master table repo. We will need to update it later if we are going to use it for this project too.

5 Codebook

The codebooks for the source data are available at: https://github.com/brad-cannell/detect_fu_interviews_public/tree/main/codebooks.

We may want to improve the links to the codebooks in the future.

Part I

Recruitment and Scheduling

6 Recruitment and Scheduling

This page will contain tables for the recruitment and scheduling data. It is possible that we will break those tables up across multiple pages as well.

Part II

Sociodemographic Information

7 Sociodemographic Information

This page contains tables that summarize sociodemographic data for the DETECT F/U Interviews participants.

7.1 Variable Name Key

The following table provides a description for each variable that appears in the following tables of descriptive statistics.

7.2 Unique People Summary Table

7.3 Overall Statistics for Only the First Visit for Each Person

NOTE: The statistic is the mean for numeric variables and the percent of N for categorical variables

7.4 Testing out downloading

Example from the [downloadthis website](#). This works, but Excel isn't the most user-friendly format.

Turn the `socio_demo_table` into a downloadable flextable object in a Word document.

Part III

General Health

Part IV

Home Inspection

Part V

EM Self-Report

Part VI

APS Investigations

Part VII

Interviewer Observations

Part VIII

LEAD Panel Assessment

8 LEAD Panel Assessment

This page contains tables that summarize the LEAD Assessment Panel Data. The first table summarizes the data without grouping the rows by MedStar ID while the second table provides a summary of abuse determination for each unique MedStar ID.

8.1 Summary of Unique Medstar IDs for the LEAD Assessment Data

8.2 Variable Name Key

The following table provides a description for each variable that appears in the following tables of descriptive statistics.

8.3 Summary Statistics for LEAD Panel Assessment Positive Votes

8.3.1 Any positive determinations at each assessment (initial, secondary, and post-DETECT) for each subtype of abuse and any overall across all subtypes.

8.3.2 Final LEAD Assessment determination based on majority vote

8.4 Count and Percentage of Dissenting Votes for Each Panelist Discipline

8.5 Testing out downloading

Example from the [downloadthis website](#). This works, but Excel isn't the most user-friendly format.
